

Why Should Your Organization Move to the Cloud?

Without even thinking about it, every day you are accessing the cloud—with smart home devices, your banking app, social media and more. The cloud is making applications and systems you are using easy to access, user-friendly and secure. In many respects you—and your employees, partners and customers—are already in the cloud.

Continue reading to discover three reasons why a cloud migration makes business sense.

Is your organization looking to solve these challenges?

Siloed Data

Heavily reliant on on-premise systems

High costs of training for IT staff

Unable to leverage new application functionalities

Gaps in security

Stagnant, unadvanced business systems

Is the answer an enthusiastic "Yes"!??

A migration of operational systems and data to the cloud could be a good fit for your organization.

Top 3 Reasons to Move to the Cloud

1 Your people will be supported

All your users from employees to customers can benefit in terms of access to applications powered by the latest updates. The cloud also enables fast launch of functionality to a broad organizational audience.

2 Keep pace with technology and save money

Your organization will be able to change your focus from always patching and maintaining your current systems to making sure that you are up-to-date on all of your servers and classes. Tracking database and server end of life and resolving maintenance issues also becomes a thing of the past.

3 Deliver insight for better decision-making

Having key linkages across business systems, including your business intelligence tools, provides the opportunity for robust reporting, quick information sharing and the potential for single sign on. The transition to the cloud also provides the opportunity to leverage Azure's functionality to bring predictive and prescriptive analytics to your business.
